Notice Regarding Non-ATARI® Parts

Use of non-ATARI parts or modifications of any ATARI game circuitry may adversely affect the safety of your game, and may cause injury to you and your players.

You may void the game warranty (printed on the inside back cover of this manual) if you do any of the following:

- Substitute non-ATARI parts in the game.
- Modify or alter any circuits in the game by using kits or parts not supplied by Atari Games Corporation.

NOTE

This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instruction manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of Federal Communications Commission (FCC) Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area or modification to this equipment is likely to cause interference in which case the user, at his own expense, will be required to take whatever measures may be required to correct the interference. If you suspect interference from an ATARI® game at your location, check the following:

- All green ground wires in the game are properly connected as shown in the game wiring diagram.
- The power cord is properly plugged into a grounded three-wire outlet.
- The game printed-circuit boards (PCBs) are properly installed with the Electromagnetic Interference (EMI) ground plane.

If you are still unable to solve the interference problem, please contact Customer Service at Atari Games Corporation. See the inside front cover of this manual for service in your area.

Safety Summary

The following safety precautions apply to all game operators and service personnel. Specific warnings and cautions will be found throughout this manual where they apply.

▲ WARNING **▲**

Properly Ground the Game. Players may receive an electrical shock if this game is not properly grounded! To avoid electrical shock, do not plug in the game until it has been inspected and properly grounded. This game should only be plugged into a grounded three-wire outlet. If you have only a 2-wire outlet, we recommend you hire a licensed electrician to install a grounded outlet. Players may receive an electrical shock if the control panel is not properly grounded! After servicing any parts on the control panel, check that the grounding wire is firmly secured to the inside of the control panel. Only then should you lock up the game.

AC Power Connection. Before connecting the game to the AC power source, verify that the game's power supply is properly configured for the line voltage in your location.

Disconnect Power During Repairs. To avoid electrical shock, disconnect the game from the AC power source before removing or repairing any part of the game. When removing or repairing the video display, extra precautions must be taken to avoid electical shock because high voltages may exist within the display circuitry and cathode-ray tube (CRT) even after power has been disconnected. Do not touch internal parts of the display with your hands or with metal objects! Always discharge the high voltage from the CRT before servicing this area of the game. To discharge the CRT: Attach one end of a large, well-insulated, 18-gauge jumper wire to ground. Momentarily touch the free end of the grounded jumper to the CRT anode by sliding it under the anode cap. Wait two minutes and discharge the anode again.

Use Only ATARI Parts. To maintain the safety integrity of your ATARI game, do not use non-ATARI parts when repairing the game. Use of non-ATARI parts or other modifications to the game circuitry may adversely affect the safety of your game, and injure you or your players.

Handle the CRT With Care. If you drop the CRT and it breaks, it may implode! Shattered glass can fly six feet or more from the implosion.

Use the Proper Fuses. To avoid electrical shock, use replacement fuses which are specified in the parts list for this game. Replacement fuses must match those replaced in fuse type, voltage rating, and current rating. In addition, the fuse cover must be in place during game operation.

CAUTION

Properly Attach All Connectors. Make sure that the connectors on each printed-circuit board (PCB) are properly plugged in. Note that they are keyed to fit only one way. If they do not slip on easily, do not force them. A reversed connector may damage your game and void the warranty.

Ensure the Proper AC Line Frequency. Video games manufactured for operation on 60 Hz line power (i.e., United States) must not be operated in countries with 50 Hz line power (i.e., Europe). The fluorescent light ballast transformer will overheat, causing a potential fire hazard if 60 Hz games are operated on power lines using 50 Hz. Check the product identification label of your game for the line frequency required.

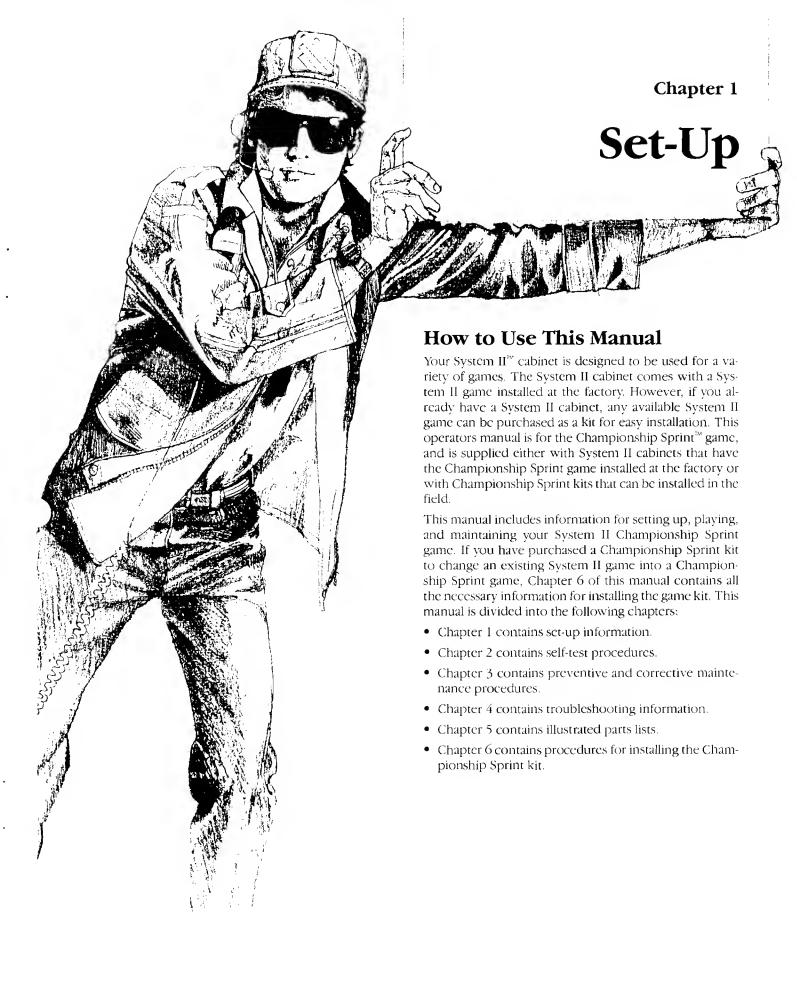

ABOUT NOTES, CAUTIONS, AND WARNINGS

In all Atari publications, notes, cautions, and warnings have the following meaning:

NOTE—A highlighted piece of information.

CAUTION—Equipment and/or parts can be damaged or destroyed if instructions are not followed. You will void the warranty on Atari printed-circuit boards, parts thereon, and video displays if equipment or parts are damaged or destroyed due to failure of following instructions.

WARNING—Players and/or technicians can be injured or killed if instructions are not followed. (The word *WARNING* is always surrounded by international warning symbols—triangles with exclamation marks inside of them.)

System II Paperboy™ games located in the field were built with a different power supply, Audio PCB, and utility panel than the System II Championship Sprint games. Refer to Chapter 5, Illustrated Parts List, in the *Paperboy Operators Manual* (TM-275) for information regarding these components. The figure number and part number for each of these components follow:

Figure No.	Part No.	Component
5-5	A037671-16	Linear Power Supply
5-12	A043046-01	Regulator/Audio III PCB
5-6	A043146-01	Utility Panel
Refer to CO-275-01 Supplement	A043785-xx	Sierracin 5-Volt Power Supply

For the wiring and schematic diagrams, refer to the *Paperboy Schematic Package Supplement* (SP-275) and the *Sierracin 5-Volt Power Supply Supplement* (CO-275-01).

NOTE

If you do not have the Paperboy manual or the supplements, use the form in the back of this manual to obtain a free copy.

Wiring and schematic diagrams for the System II Championship Sprint game circuitry are contained in the Schematic Package Supplement (SP-292) included with your game.

This chapter includes information required to set up and play your Championship Sprint game. Carefully read the information in this chapter before applying power to the game.

A

WARNING

To avoid electrical shock, do not plug in the cabinet until it has been properly inspected and set up for the line voltage in your area.

This cabinet should only be connected to a grounded three-wire outlet. If you have only a two-wire outlet, we recommend that you hire a licensed electrician to install a grounded outlet. Players can receive an electrical shock if the cabinet is not properly grounded.

Do not touch internal parts of the display with your hands or with metal objects.

Inspecting the Game

WARNING

Do not plug in the game until you have completed the following inspection steps.

Please inspect your System II Championship Sprint game (or kit) carefully to ensure that the game (or kit) is complete and delivered to you in good condition. Figure 6-1 shows the locations of the component parts of the assembled game. Refer to Chapter 6 for a list of the kit parts. Table 1-1 lists the space, power, and environmental requirements.

Inspect the factory-assembled game as follows:

- 1. Examine the exterior of the cabinet for dents, chips, or broken parts.
- Unlock and open the rear access panel. Unlock and open the coin doors. Inspect the interior of the cabinet as follows:
 - a. Ensure that all plug-in connectors (on the cabinet harnesses) are firmly plugged in. Do not force connectors together. The connectors are keyed so they only fit in the proper orientation. A reversed edge connector can damage a printed-circuit board (PCB) and will void your warranty.
 - b. Ensure that all plug-in integrated circuits on each PCB are firmly plugged into their sockets.
 - Inspect the power cord for any cuts or dents in the insulation.
 - d. Inspect the power supply. Make sure that the correct fuses are installed. Check that the harness is plugged in correctly and that the fuse block cover

Table 1-1 Game Specifications

Characteristic	Specification					
Power Consumption	300 V-A, 239 W RMS maximum with kit parts installed					
Temperature	+5° to +38° C (+37° to +100° F)					
Humidity	Not to exceed 95% relative					
Line Voltage	102 to 132 VAC (U.S. Games) 198 to 264 VAC (Irish Games)					
Width	25.25 in. (64 cm)					
Depth	37¾ in. (95 cm) with control panel installed					
Height	72 in. (183 cm)					
Weight	330 lbs. (149 kg) maximum with kit parts installed					

Championship Sprint Set-Up

is mounted in place. Check that the green ground wire is connected.

e. Inspect other major sub-assemblies, such as the video display, printed-circuit boards (PCBs), speakers, and the fluorescent tube. Make sure they are mounted securely and that the green ground wires are connected.

Inspect the Championship Sprint kit as follows:

- Verify that all of the Championship Sprint kit parts listed in Table 6-1 of this manual are included in your kit
- 2. Examine the kit parts for dents, chips, or broken parts.

Installation of Control Panel

For packaging purposes, the Championship Sprint control panel is shipped inside the cabinet. The panel is mounted on a single metal bracket on the inside left side panel in the rear of the cabinet. (See Figure 1-1.) Perform the following procedure to remove the control panel from the cabinet.

- I. Using a Phillips screwdriver, remove the two screws holding the metal bracket to the cabinet. Remove the control panel from inside the cabinet.
- Using a 1/8-inch hex driver, remove the two screws and washers holding the metal bracket to the control panel. Save this hardware. Discard the bracket or remount it in the cabinet for future control panel storage.
- 3. Replace the existing control panel with the Championship Sprint control panel. Refer to Chapter 3, *Removing the Control Panel*.

Control and Switch Locations

Power On/Off Switch

The power on/off switch is located at the bottom rear of the cabinet. (See Figure 5-1.)

Volume Control

The volume control is located on the Audio II PCB behind the upper coin door. (See Figure 1-2.) The volume control adjusts the level of sound produced by the game.

Coin Counter

The coin counter is located on the inner cabinet wall opposite the upper coin door. The coin counter records the number of coins deposited.

Self-Test Switch

The self-test switch is located on the Audio II PCB behind the upper coin door. (See Figure 1-2.) The self-test switch selects the Self-Test Mode to check game operation. Refer to Chapter 2 for a complete description of self-test operation. (See Figure 1-2.)

Coin and Game Option Settings

The System II cabinet has two dual-in-line package (DIP) option switches located on the CPU printed circuit board (PCB).

- The option switch at location 6/7A is for selecting coin options.
- The option switch at location 5/6A is for selecting game options.

Set the coin and credit option settings, game option settings, and automatic high score reset setting by changing the settings of the DIP switches. Refer to Table 1-2 and Table 1-3 for the available options and default (recommended) settings.

To change these settings, first remove the thin film of plastic covering the option switch. Use a pen or a sharp-pointed instrument to slide the appropriate small buttons to different settings. Right is the *on position*, and left is the *off position*. The steering wheel controls and the pushbuttons are *not* used to change these settings.

Operating Modes

Championship Sprint has four operating modes: Attract, Play, High Score, and Self-Test.

Attract Mode

The Attract Mode begins either when the game is plugged in or after exiting the Play, High Score, or Self-Test Modes. The Attract Mode ends when the correct amount of coins or tokens are inserted and the start button(s) are pressed, or when the self-test switch is turned off. The Attract Mode continuously cycles through the following events:

- Title Page—The title *CHAMPIONSHIP SPRINT* is displayed on an explosion/checkerboard background.
- High Score Table—The top 30 scores are displayed. (Championship Sprint Racing Team). The top 3 scores are highlighted at the top of the screen.
- Demo Mode—The drone cars run two laps on each of the eight tracks,taking each checkered flag.

During the Attract Mode, if a whole new credit (not partial credits) is entered into the game through the coin mechanisms, a gong sound is played. The credit status and current coin mode are constantly displayed and updated throughout the Attract Mode.

Play Mode

Play mode begins when the correct credit is entered and the blue or red start button is pressed. Refer to *Game Play* for playing information.

Sct-Up Championship Sprint

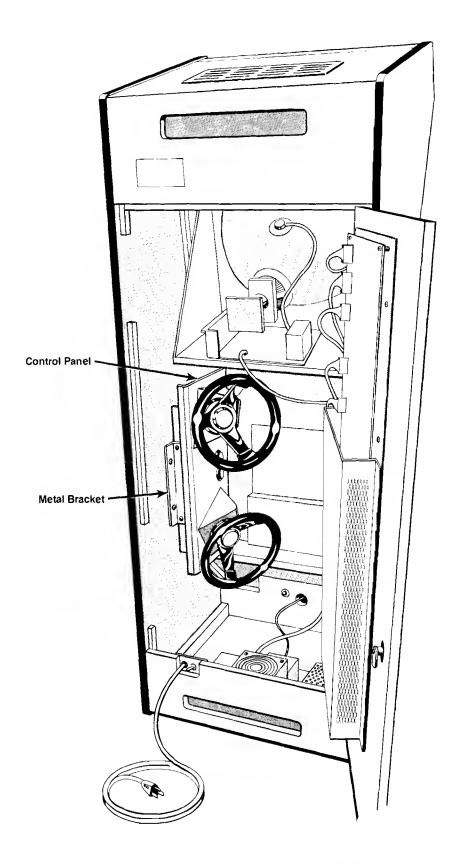

Figure 1-1 Removing Control Panel from Shipping Position

Championship Sprint Set-Up

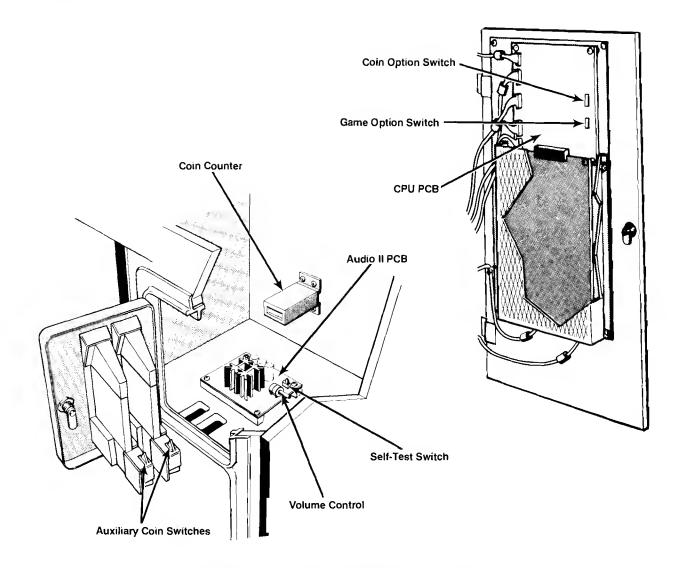

Figure 1-2 Control and Switch Locations

High Score Mode

In the High Score Mode, if a player's score is among the top 30, the player can enter the desired initials by turning the steering wheel to select the initial, and by pressing the start button or accelerator pedal to insert the initial.

Self-Test Mode

You can set the Championship Sprint game to the Self-Test Mode by turning on the self-test switch located on the Audio II PCB behind the upper coin door. Refer to Chapter 2 for detailed self-test information.

Game Play

The game play begins once players select a car by depositing coins into the proper coin slot. One coin slot is designated for each of the two player cars—blue, or red. The first player to press start is given the option to select one of eight unique starting tracks. A select screen displays all

tracks. Players choose the desired starting track by using the steering wheel to indicate the desired track, and by pressing the accelerator pedal to start the game on the chosen track.

At the starting line, a green flag indicates the race is on. During the race, the lead player's lap number is flashing. A white flag appears when the last lap is on. At the finish line, a checkered flag awaits the winner. At the end of each heat, players go to the "Winner's Circle" where racing statistics show the players' rankings, their best lap times, and their average lap times. Players who beat the drone cars continue in the game by going on to the next heat. Each new heat takes place on a new track.

During each race, players compete to collect gold wrenches that appear randomly on each track. These wrenches are a key element in the game because players can trade them in for custom car features. Players can customize their cars to suit their driving skills with the following options:

Set-Up Championship Sprint

[■] Manufacturer's recommended settings

Championship Sprint Set-Up

Super Traction—gives players more maneuverability around sharp turns.

Turbo Acceleration—gets players off to a fast start at the beginning of the game or after they crash.

Higher Top Speed—helps players stay in the lead, only if they can handle the high speed. (Beginning players learn quickly that this feature should be used with more practice.)

Fast Chopper—increases the speed of the helicopter recovery sequence.

There are five levels of each of these features for a total of 20 custom car bonuses. After completing five levels of Fast Chopper, players are also given an unlimited option of *increased score*, to motivate more skillful players who can gradually acquire all 20 car bonuses. Operators can select the number of wrenches required for each car bonus. Championship Sprint is shipped on a 3-wrench-perbonus setting.

These bonus wrenches also provide additional player incentives that result in higher earnings: Players get to keep acquired custom car features if they lose to a drone car, as long as they use the add-a-coin feature in the game. Also, bonus wrenches are awarded to new players who enter a game on the more difficult tracks. Additionally, a bonus wrench is awarded to each winning car that betters the existing "best lap time" for each track.

Championship Sprint has eight different tracks, each one introducing new challenges. Jump ramps, opening and closing gates, hidden short cuts, over/under passes, and banked turns all require special driving maneuvers. Throughout each heat, players are introduced to new track obstacles such as oil spills, twisters, traffic cones, and "poppers." Special bonus score pads also appear that players can run over for points. Players will crash whenever they hit a wall at high speeds. Each time they crash, they must wait for a recovery period, indicated by the rescue helicopter that comes on the screen.

To complete the driving experience, Championship Sprint has detailed animation and custom stereo music with realistic sound effects.

Operator Hints

Here are some pointers for maximizing earnings from your System II Championship Sprint game.

Maximizing Earnings

The key to maximum earnings is striking a midpoint on game times. Initially, game times should be short enough to allow higher player turnover. At the same time, game times must be long enough to give the player good value and ensure repeat play.

Championship Sprint has a comprehensive statistics and coin accounting package, which is described in greater detail in Chapter 2 of this manual. To find out whether or

not your players are getting adequate value for their money, you should evaluate the following information.

NOTE

For your convenience, a pre-printed, tear-out statistics sheet is included at the back of this manual. Use this sheet to track your Championship Sprint game statistics.

Average Game Times/Average Time Between Coin Drop

Two statistics are crucial in evaluating the appropriate option settings on your Championship Sprint game. First, check the average game time which is shown in the Accounting Information screen in the Self-Test Mode. If the game is set at the factory-recommended settings, initial game times should average between 2:00 and 3:00. If this is not the case, you should then check the average time between coin drop, which can be calculated by two readings shown on the Accounting Information screen.

To calculate: divide the total play time by the total games: $((No. \text{ of hours played} \times 60 + \text{minutes}) \div \text{total games}) \times 60 = \text{seconds between coin drop. This number should range from 65 to 90 seconds.}$

If a high percentage of your average game times are under 90 seconds, and your average time between coin drop is under 50 seconds, the current game settings may be too difficult. You should consider changing the drone difficulty to the EASY setting. If game times are still too short after one or two weeks, try changing the track hazard difficulty to the EASY setting.

Conversely, if a high percentage of your average game times are over 3:30, and your average time between coin drop is over 100 seconds, the current game settings may be too easy. Try changing the drone difficulty and the track hazard difficulty options to the MEDIUM HARD setting.

NOTE

The previously mentioned recommendations are based on one coin per play, U.S. currency.

Game Sounds

Your System II cabinet with the Championship Sprint game uses more effective audio than previous games, which results in more player involvement and enjoyment. The System II games use advanced digital sound-generation techniques to create realistic musical instrument sounds (such as clarinets, harmonicas, drums, and violins). Although a player may not be consciously aware

Set-Up Championship Sprint

of the music, it has a direct effect on the excitement and emotional experience of the game.

The Championship Sprint game creates ear-catching sound effects, which are designed to give feedback to make the player believe that the game is responding directly to his actions. To maximize the player's enjoyment of this enhanced audio and maximize your earnings, consider the following hints:

- 1. The game location should be a relatively dead acoustical environment. The goal is to minimize unnecessary sound reflection, so that the sounds from the Championship Sprint game won't be drowned out by the accumulation of other sounds that bounce around the room. Carpets help eliminate sound reflections from the floor. Acoustical tile is also useful, especially if you have low ceilings.
- 2. If you use an environmental sound system or a stereo, consider lowering its volume or perhaps even turning it off. In the days when video games just made harsh

- beeps and boops, a central sound system helped make up for the lack of drive and excitement in a game's sounds. But your Championship Sprint game is very musical, and a sound system interferes with the game's ability to interest players and draw bystanders.
- 3. Be concerned with the overall volume levels in arcade environments. The goal is to involve the players' emotions, not to damage their hearing. To a certain point, raising the game volume helps add to player excitement, but above that level it creates hearing fatigue and the high volume starts to drive players away. Rather than turning up the volume on the Championship Sprint games to cut through the background sound level, try lowering the volume of any neighboring games that have sounds which are not an attractive or important element. Careful placement of games and attention to unnecessary noise sources can also help increase the player's sense of game involvement and interaction.

Self-Test

This game tests itself and provides visual and audible indications of the condition of the game circuitry and controls. Self-test information is displayed on the screen and sent through the sound system. No additional equipment is required.

We suggest that you perform a self-test when you first set up the game, each time you collect the money, or when you suspect game failure. Coin and game option settings are displayed in the Self-Test Mode.

Thirteen self-test screens provide a visual and audible check of the Championship Sprint[™] game circuits. Refer to Chapter 1 for the self-test switch location.

The Self-Test Mode can be entered immediately after turning on the game power, either from the Play Mode or from the Attract Mode. If the self-test switch is turned on during the Play or the Attract Mode, the first display to appear is the 6502 Processor Test. By pressing the red start (right) button, the self-test advances to the Pedal Test. The self-test then advances from the Pedal Test to the end. The game power must be turned off, the self-test switch turned on, and the game power turned on again to start the self-test with the RAM/Interrupt/ROM Test.

The following self-test procedure is presented in the sequence in which the self-test screens appear when the self-test switch is turned on and *then* the game power is turned on. Turning off the self-test switch at any time during the self-test causes the game to return to the Attract Mode.

NOTE

During any of the self-tests, press the red start (or right) button to advance to the next screen.

Self Test Championshîp Sprint

RAM/Interrupt/ROM Test

The RAM/Interrupt/ROM Test screens are shown in Figures 2-1, 2-2, and 2-3. These screens display the failure information for the RAM, interrupt, and program ROM circuitry on the CPU and Video PCBs. If the RAM/Interrupt/ROM test passes, the display advances to the 6502 Processor Test.

The RAM test checks the condition of the T-11 microprocessor RAM, zero page RAM, motion object RAM, playfield RAM, alphanumeric RAM, and associated circuitry located on the Video PCB. If the RAM test fails, an error message gives the location of the failed RAM or associated circuitry on the Video PCB as shown in Figure 2-1.

If the zero-page RAM or associated circuitry fails, the screen turns red and the address location of the failed component flashes continuously to facilitate trouble-shooting.

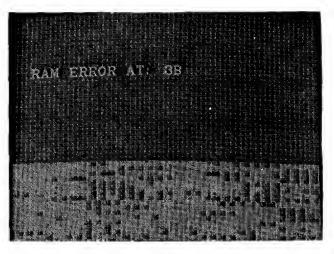

Figure 2-1 RAM Test Fails

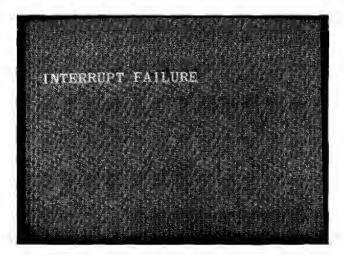

Figure 2-2 Interrupt Test Fails

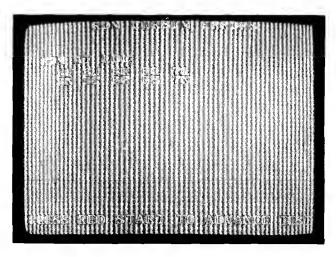

Figure 2-3 ROM Test Fails

After the RAM test passes, the interrupts on the CPU and Video PCB are checked. If the interrupt test fails, an error message as shown in Figure 2-2 can appear on a green screen, which indicates a possible vertical-blanking or interrupt-logic failure.

After the interrupt test passes, all eight of the program ROMs on the CPU PCB are tested for checksums. If the ROM test fails, an error message gives the location of the failed ROM or associated circuitry as shown in Figure 2-3.

6502 Processor Test

The 6502 Processor Test screen provides visual and audible information to indicate the condition of the 6502 sound microprocessor and associated circuitry. All functions of the sound microprocessor are checked including: RAM/ROM, interrupts, music synthesizer, and sound-effects processor. Basic communication between the T-11 (master) and the 6502 (slave) microprocessors is also checked.

The 6502 test starts with a reset/communications check that first resets the 6502 and then checks for proper response to start up protocol. This test checks the communications ports (T-11 to 6502 and 6502 to T-11), the 6502 reset circuit, and the general condition of the 6502.

If the 6502 circuitry does not respond properly to the reset, the system retries the reset procedure ten times. Then an error message and retry count number is displayed as shown in Figure 2-4.

If the 6502 circuitry fails to reset through all ten attempts, a communications error message is displayed as shown in Figure 2-5.

If the reset/communications check passes, then the condition of the 6502 microprocessor, RAM, ROM, interrupts, music (Yamaha) synthesizer, and associated circuitry is checked. If one or more of these circuits fails, an error message is displayed as shown in Figure 2-6.

Championship Sprint Self-Test

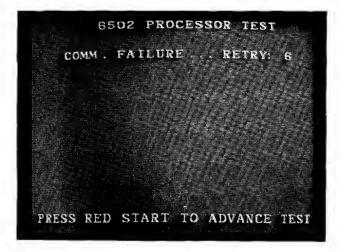

Figure 2-4 Reset Retry

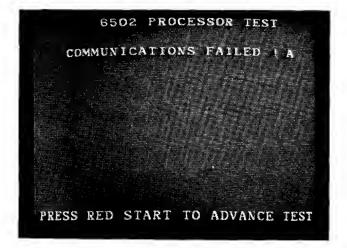

Figure 2-5 Communications Fails

If the RAM, ROM, and music synthesizer check passes, then the music (Yamaha) synthesizer, and sound-effects generator (POKEY) sound outputs are checked. As each of these three tests is run, an appropriate message is displayed as shown in Figure 2-7.

- YAMAHA TEST consists of eight tones in a major scale that alternate between left and right sound channels (16 tones total).
- *L. POKEY TEST* consists of four tones in a major chord that come from the left sound channel.
- R. POKEY TEST consists of four tones in a major chord that come from the right sound channel.

After the three sound output tests are completed, the sound status messages are displayed as shown in Figure 2-8.

• *NUMBER OF SOUNDS* is the total number of sounds used in the Championship Sprint game.

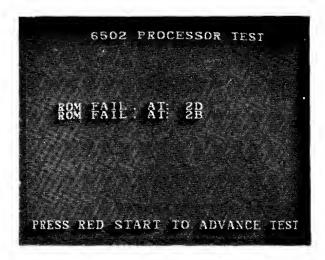

Figure 2-6 Music/RAM/ROM Fails

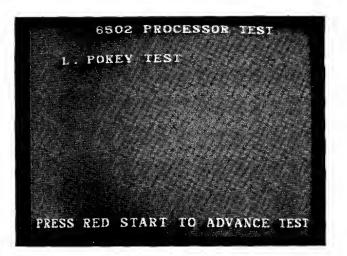

Figure 2-7 Sound Output

• *CURRENT SOUND* is the current sound selected for playing.

Press the blue car button to select the sound numbers indicated by the *CURRENT SOUND* message shown in Figure 2-8. Turn the blue car steering wheel to sequence through the selected sounds.

The sound status screen also indicates the condition of the left and right coin switches. Press the left and right coin switches, and check the screen for a corresponding *LEFT COIN* and *RIGHT COIN* message. (See Figure 1-2 in Chapter 1 for the switch locations.)

Press the red start button to obtain the next screen.

Pedal Test

The Pedal Test screen is shown in Figure 2-9. This screen indicates the condition of the two foot pedal potentiometers, A/D converter, blue car switch, and associated cir-

Self-Test Championship Sprint

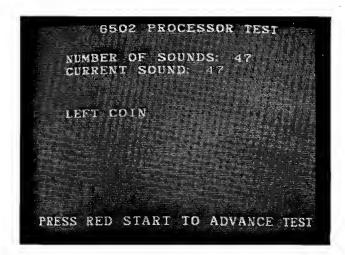

Figure 2-8 Sound Status

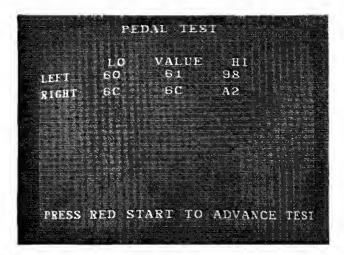

Figure 2-9 Pedal Test Passes

cuitry. (It is assumed that the red start switch works because it was used to advance to this screen.) The Pedal Test screen is also used to calibrate the foot pedal potentiometers.

Press the blue car button to obtain the Pedal Test screen shown in Figure 2-9.

If the range of the foot pedal potentiometers (low to high) is large enough, then the message OK is displayed next to the appropriate control range reading. If the range is too small, then the message BAD is displayed.

Calibration Procedure

The foot pedal controls are calibrated at the factory and should recalibrate themselves during game play. However, if the foot pedals do not respond correctly, calibrate each one as follows:

- Press and hold down the blue car button. Press the red car button once.
- 2. While holding down the blue button, cycle each foot pedal to its extreme up and down positions. Check the display screen; each foot pedal range should read *OK*. Then release the blue car button. Press the red start button.

NOTE

After completing the calibration procedure, you *must* press the red start button to save the calibration. Pressing the button also advances the screen at this point.

3. If the pedal problem persists, check the physical alignment of each foot pedal potentiometer.

Leta Test

The Leta Test screen is shown in Figure 2-10. This screen indicates the condition of the steering wheel circuitry. Each wheel should display a zero value when the wheel is idle. Turning each wheel in either direction should change at least one of the zero values to a non-zero value.

Press the red start button to obtain the next screen.

Alphanumeric Test

The Alphanumeric Test screen is shown in Figure 2-11. This screen indicates the condition of the alphanumeric ROM, alphanumeric color palettes, and associated circuitry.

The displayed alphanumeric characters are in four rows, with the first row white, the second row red, the third row yellow, and the fourth row green. If not, then there may be a problem with the color palette select circuits.

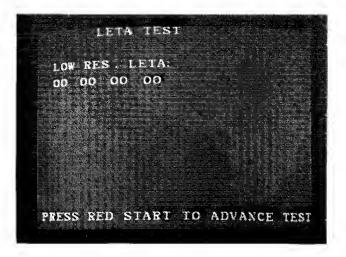

Figure 2-10 Leta Test

Championship Sprint Self-Test

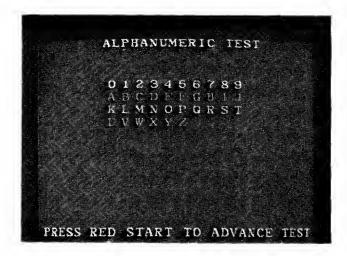

Figure 2-11 Alphanumeric Test

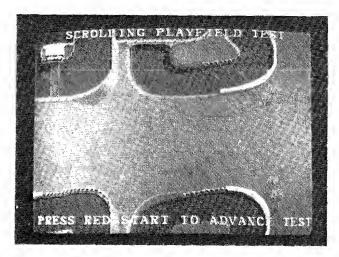

Figure 2-12 Scrolling Playfield Test

Press the red start button to obtain the next screen.

Scrolling Playfield Test

The Scrolling Playfield Test screen is shown in Figure 2-12. This screen indicates the condition of the playfield ROM, playfield display circuits, and playfield color palettes.

The display in Figure 2-12 shows a racetrack. Turn the blue car (left) steering wheel to control forward and backward scrolling. Turn the red car (right) steering wheel to control the right and left scrolling. Note that the display scrolls correspondingly.

Press the red start button to obtain the next screen.

Motion Object Test

The first Motion Object Test screen is shown in Figure 2-13. This test indicates the motion object horizontal and

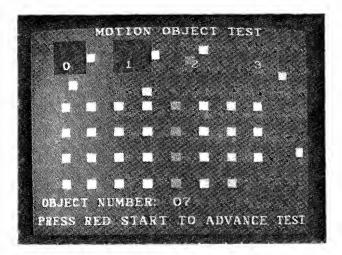

Figure 2-13 Motion Object Test

vertical display locations, motion-object color palettes, and the motion/playfield prioritizing logic circuit.

The Motion Object Test screen should show 39 motion objects and four colored boxes (numbered 0 through 3). The left two boxes (0 and 1) should be red, and the right two boxes (2 and 3) should be green. The motion objects should be colored (from left to right) blue, light blue, purple, and white. Any error in color can indicate a problem with the color palette select circuits.

Turn the red car steering wheel to control forward and backward scrolling, and the blue car steering wheel to control right and left scrolling. Note that the currently displayed motion object moves correspondingly. Move the motion object across the four colored boxes. Note that the motion object moves *behind* the red boxes and *in front of* the green boxes. Press the blue car button to select the next motion object and repeat the preceding procedure. This procedure checks the prioritizing logic circuitry.

Press the red start button to obtain the next screen.

Motion Object Height Test

The Motion Object Height Test screen is shown in Figure 2-14. This test indicates the motion object height circuit and the horizontal load disable circuit.

Each successive column of motion objects should be 16 pixels taller than the last. The top 16 pixels of each column should be the same. Each column should add a new 16×16 pixel stamp picture to the bottom and slide the previous one up by 16 pixels. Turn the blue car and the red car steering wheels to move the entire picture around on the screen. Press the blue car button to obtain a new set of motion objects.

Press the red start button to obtain the next screen.

2-5

Self-Test Championship Sprint

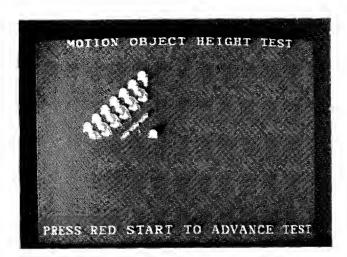

Figure 2-14 Motion Object Height Test

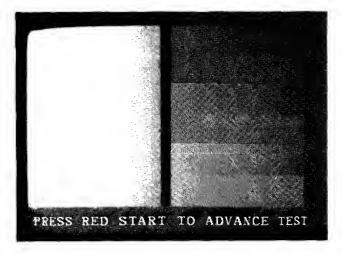

Figure 2-15 Color Bar Test

Color Bar Test

The Color Bar Test screen is shown in Figure 2-15. This test indicates the condition of the color RAM, video amplifiers, and associated circuitry.

Sixteen vertical grey-scale bars and three groups of sixteen vertical bars with shades of red, green, or blue are displayed. The brightest bar should be on the left and darkest (black) bar on the right, with a black frame around the screen. Each group of red, green, or blue should be split in half horizontally to show two fade scales. Each upper fade scale is ranged by changes in overall intensity (Z) and each lower fade scale by individual color intensity (R, G, B). This test helps to determine if white tracking is set properly (grey-scale bars range from white to grey). Refer to the white tracking procedure in the video display manual if adjustment is required.

Press the red start button to obtain the next screen.

Color Purity Test

The Color Purity Test consists of five color displays that indicate the condition of the display color-purity circuits. The first display to appear should be a red screen with the word *RED* displayed at the bottom of the screen as shown in Figure 2-16.

Press the blue car button, and the next display to appear should be a green screen with the word *GREEN* displayed at the bottom of the screen. Press the blue car button to obtain a blue, white, and finally a grey screen. After the grey screen, the display will repeat the same sequence.

If the display characteristics are not correct, refer to the video display manual for the color-purity adjustment procedure or the possible cause of failure.

Press the red start button to obtain the next screen.

Convergence Test

The Convergence Test screen is shown in Figure 2-17. This test indicates the condition of the display size, centering, linearity, and convergence.

A violet dot pattern displays the red-to-blue convergence. Press the blue car button to obtain a white-dot convergence pattern. Convergence between any two colors should not exceed 0.7 mm in the middle of the screen and 1.2 mm in the corners. This pattern can also be used to set up screen size, centering, and brightness (black level).

Press the red start button to obtain the next screen.

Accounting Information

The Accounting Information is shown in Figure 2-18. This screen provides a visual check of the current game statistics. The statistics information is accumulated either from the first time the game was turned on or from the last time the statistics were reset.

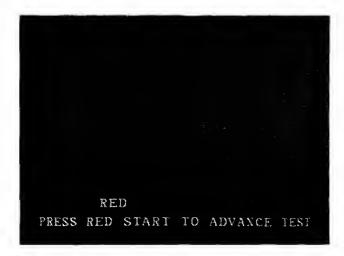

Figure 2-16 Color Purity Test

Championship Sprint Self-Test

Figure 2-17 Convergence Test

Figure 2-18 Accounting Information

The following game statistics appear on the Accounting Information screen:

- LEFT COINS shows the total number of coins deposited in the left or blue car coin mechanism.
- RIGHT COINS shows the total number of coins deposited in the right or red car coin mechanism.
- ADD A COINS shows the total number of coins deposited in all coin mechanisms during the add-a-coin mode of game play only.
- 1 PLAYER HEATS shows the total number of heats or races that were run with one player only.
- 2 PLAYER HEATS shows the total number of heats or races that were run with two players.
- TOTAL GAMES shows the total number of coins deposited in all coin mechanisms.

- TOTAL GAME TIME shows the accumulated time of all one- and two-player games played in hours, minutes, and seconds.
- AVERAGE GAME TIME shows the total game time divided by the total number of games in hours, minutes, and seconds.
- *TOTAL ON TIME* shows the total time in hours, minutes, and seconds that the game has been turned on.
- TOTAL PLAY TIME shows the total time in hours, minutes, and seconds that the game has been played (percent usage = total play time/total on time).

The game statistics are accumulated from the first time the game is turned on or from the last time the statistics were reset.

Reset Saved Information Screen

The Reset Saved Information screen is shown in Figure 2-19. This screen resets the high score table and the accounting information. Use the following procedure to reset these items:

- 1. Rotate the left steering wheel to select the item to reset
- Press the blue car button to change the NO message to YES.
- 3. Press the red start button to reset the selected tables. After a brief *PLEASE WAIT* message is displayed, the self-test automatically advances to the next screen.

Switch Settings

The Switch Settings screen is shown in Figure 2-20. This screen indicates the current coin and credit option settings, and the game option settings of the two dual-in-line

Figure 2-19 Reset Saved Information Screen

Self-Test Championship Sprint

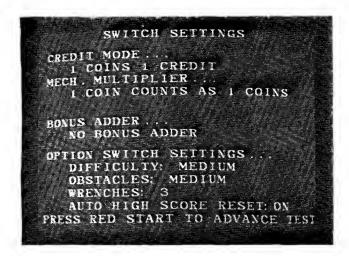

Figure 2-20 Switch Settings

package (DIP) switches at locations 6/7A and 5/6A on the CPU PCB.

- The option switch at location 6/7A is used for selecting the coin and credit options.
- The option switch at location 5/6A is used for selecting the game options.

Set the coin and credit option settings and the game option settings by changing the settings of the DIP switches located on the CPU PCB. Refer to Tables 1-2 and 1-3 in this manual for the available options and default (recommended) settings.

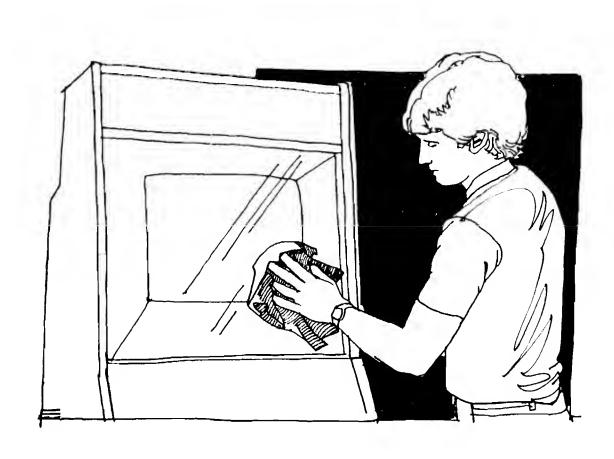

To change these settings, first remove the thin film of plastic covering the option switch. Use a pen or a sharp-pointed instrument to slide the appropriate small buttons to different settings. Right is the *on position*, and left is the *off position*. The steering wheel controls and the push buttons are *not* used to change these settings.

Press the red start button to return to the 6502 Processor Test.

Maintenance

This chapter includes preventive and corrective maintenance procedures for the Championship Sprint™ game components that are subject to the most use. To assure maximum trouble-free operation from this game, we recommend that preventive maintenance be performed as described in this chapter.

Removal, disassembly, reassembly, and replacement procedures are provided for components that might require corrective maintenance. Appropriate references are provided to Chapter 5, Illustrated Parts Lists, to aid in locating the parts of this game that are mentioned, but not illustrated, in the maintenance procedures.

Maintenance Championship Sprint

Preventive Maintenance

Preventive maintenance includes cleaning, lubricating, and tightening hardware. How often preventive maintenance is performed depends upon the game environment and frequency of play. However, for those components listed in Table 3-1 Preventive-Maintenance Intervals, we recommend that preventive maintenance be performed at the intervals specified.

Preventive-Maintenance Intervals

The preventive-maintenance intervals specified in Table 3-1 are the recommended minimum requirements for the components listed.

Δ.

WARNING

To avoid possible electrical shock, turn off the game before performing any maintenance procedures.

The 5-volt switching power supply for this game does not have a shield. This power supply has high voltages on it when power is turned on. Therefore, be sure you *do not touch this power supply* unless you have turned off the power to the game.

Removing the Control Panel

Perform the following procedure to remove/replace the control panel. (See Figure 3-1.)

- 1. Use a 1/8-inch hex driver to loosen the two screws securing the lower retainer to the cabinet.
- Unlock and open the coin door on the front of the cabinet.
- 3. Carefully reach up through the coin door opening and release the spring-draw latches located under the control panel on both sides of the cabinet.

Table 3-1 Recommended Preventive-Maintenance Intervals

Steering Wheel Control	Inspect weekly, lubricate, and tighten hardware at least every three months.
Foot Pedal Control	Lubricate, and tighten hardware at least every three months.
Coin Mechanism	Inspect whenever you collect coins.

Clean at least every three months.

- 4. Use a 1/8-inch hex driver to remove the two screws and washers securing the front of the control panel to the cabinet.
- 5. Grasp the steering wheel and gently lift until the bottom edge of the control panel clears the cabinet.
- 6. Carefully slide the top edge of the control panel from under the lower retainer.
- 7. Lift the control panel from the cabinet just far enough to expose the control-panel harness connector.
- 8. Disconnect the steering wheel harness connector and remove the control panel from the cabinet.
- 9. Replace the control panel in the reverse order of removal.

Cleaning the Pushbutton Leaf Switches

Perform the following procedure to clean the leaf switch contacts and tighten the securing hardware.

- 1. Follow the procedure described in the preceding steps 1–8 for removing the control panel.
- 2. Use electrical contact cleaner to clean the contacts. Do not burnish them. When the pushbutton is pressed, the wiping action of the cross-bar contacts provides a self-cleaning feature. Then use the Self-Test to verify proper switch contact. (See Figure 3-1.)
- 3. Using a 15/16-inch open-end wrench, tighten the stamped nut securing the pushbutton leaf switches to the control panel.

Maintaining the Steering Wheel Controls

Preventive maintenance on the steering wheel controls consists of inspecting the steering wheel housing for excessive wear or dirt, inspecting the Coupler PCB Assembly for damage, lubricating the friction-producing surfaces of both white bearings, and, if necessary, replacing or tightening the securing hardware.

Perform the following procedure to lubricate and tighten the steering wheel controls. (See Figure 3-2.)

- 1. Open the control panel as previously described.
- 2. Apply a film of light oil (Atari part no. 107013-001) to the lubrication points shown in Figure 3-2.
- 3. Using a 5/16-inch nut driver (or an appropriate tool), tighten the screws holding the steering wheel assembly to the control panel.

Championship Sprint Maintenance

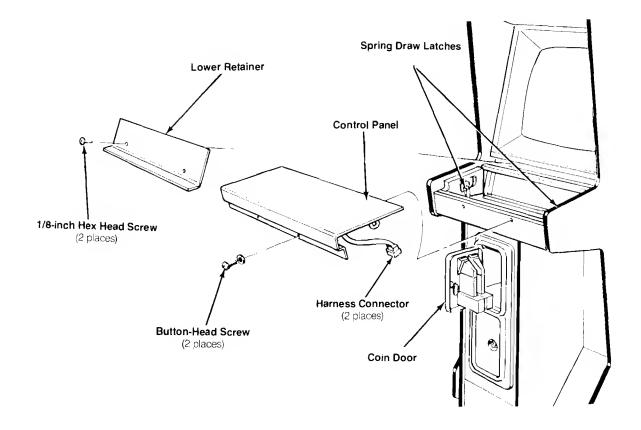

Figure 3-1 Control Panel Removal

Cleaning the Coin Mechanism

Use a soft-bristled brush to remove loose dust or foreign material from the coin mechanism. A toothbrush may be used to remove any stubborn build-up of residue in the coin path. After cleaning the coin mechanism, blow out all of the dust with compressed air.

Cleaning the Interior Components

Perform the following procedure to clean the components inside the cabinet.

Λ

WARNING

Turn off the game power, and be sure that the on/off switch cover is in place. However, do not unplug the power cord before cleaning inside the cabinet. The power cord provides a ground path for stray static voltages that can be present on the cleaning tools.

- 1. Unlock and open the rear access door.
- 2. Discharge the high-voltage from the cathode-ray tube (CRT) before proceeding. The display assembly contains a circuit for discharging the high voltage to ground when power is removed. However, to make certain, always discharge the display as follows.
 - a. Attach one end of a large, well-insulated, 18-gauge jumper wire to ground.
 - b. Momentarily touch the free end of the grounded jumper to the CRT anode by sliding it under the anode cap.
 - c. Wait two minutes and repeat part b.

CAUTION

Be extremely careful when cleaning the electrical components inside the cabinet. Avoid touching the electrical components with any solid object other than the soft bristles of the vacuum attachment or paint brush.

Maintenance Championship Sprint

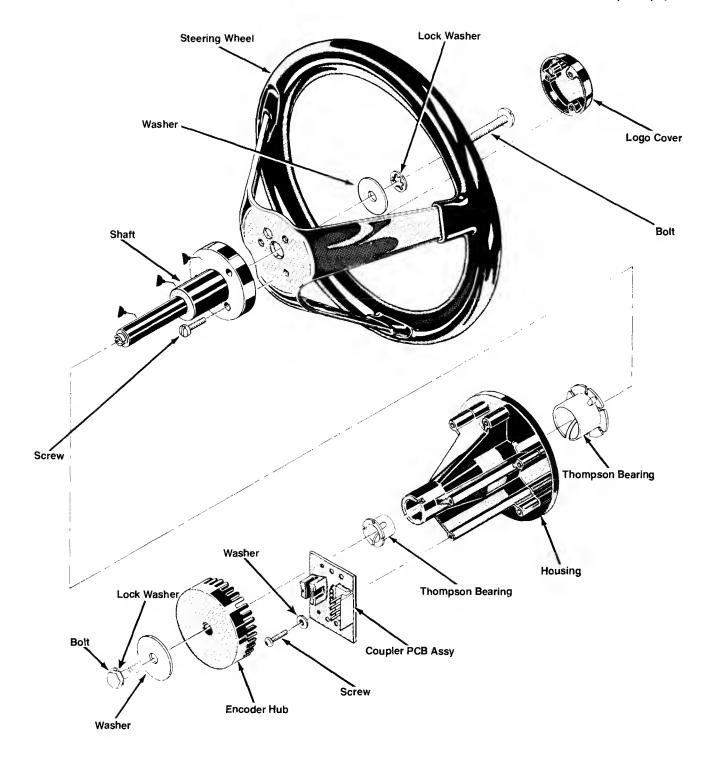

Figure 3-2 Maintaining the Steering Wheel Controls

3. Use a vacuum cleaner with a soft long-bristled brush attachment or use a soft-bristled paint brush to remove loose dirt and dust accumulated on the inside of

the cabinet. Be sure to clean the electrical components thoroughly (power supplies, PCB assemblies, display, etc.).

Championship Sprint Maintenance

Corrective Maintenance

Corrective maintenance consists of removal, disassembly, reassembly, and replacement of game components. The following procedures are provided for components that may require corrective maintenance.

Removing the Video Display

Perform the following procedure to remove/replace the video display. (See Figure 3-3.)

- 1. Turn the game power off and wait two minutes. Unplug the power cord.
- 2. Use a 1/8-inch hex driver to remove the two screws securing the lower retainer to the cabinet.
- 3. Grasp the display shield on the bottom edge and gently pull it out about a half-inch from the cabinet.
- 4. Gently lower the display shield to free the top edge from under the speaker grille.
- 5. Use a flat-head screwdriver to remove the staples, if any, securing the bezel to the cabinet.
- 6. Remove the bezel.
- 7. Unlock and open the rear access door.

▲ WARNING

High Voltage

The video display contains lethal high voltages. To avoid injury, do not attempt to service this display until you observe all precautions necessary for working on high-voltage equipment.

X-Radiation

The video display has been designed to minimize X-radiation. However, to avoid possible exposure to soft X-radiation. *never* modify the high-voltage circuitry.

Implosion Hazard

The cathode-ray tube may implode if struck or dropped. Shattered glass may cause injury within a 6-foot radius. Use care when handling the display.

- 8. Discharge the high-voltage from the cathode-ray tube (CRT) before proceeding. The display assembly contains a circuit for discharging the high voltage to ground when power is removed. However, to make certain, always discharge the display as follows.
 - a. Attach one end of a large, well-insulated, 18-gauge jumper wire to ground.
 - b. Momentarily touch the free end of the grounded jumper to the CRT anode by sliding it under the anode cap.

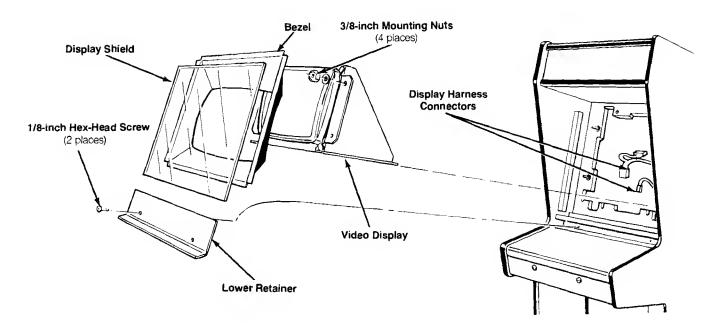

Figure 3-3 Video Display Removal

Maintenance Championship Sprint

- c. Wait two minutes and repeat part b.
- 9. From the back of the cabinet, unplug the display harness connectors and disconnect the green ground wire from the clip on the video display chassis.

WARNING

To avoid dropping the video display out of the game cabinet, use extreme care when removing the display-mounting nuts. We recommend that a second person *carefully* hold the display chassis from the back of the cabinet while the mounting nuts are being removed.

- 10. From the front of the cabinet, use a 3/8-inch wrench to remove the four nuts and flat washers securing the display to the cabinet.
- 11. Carefully slide the display out through the front of the cabinet.
- Replace the video display in the reverse order of removal.

NOTE

Whenever the cathode-ray tube is replaced, readjust the brightness, purity, and convergence as described in the display manual.

Removing the Steering Wheel

Perform the following procedure to remove/replace the steering wheel. (See Figure 3-2.)

- Open the control panel as described under *Preventive Maintenance*.
- 2. Disconnect the harness connectors from the coupler PCB connector.
- 3. Using a 5/16-inch nut driver, remove the six screws holding the steering wheel assembly to the control panel.
- 4. Lift the steering wheel assembly out of the control panel.
- Replace the steering wheel in the reverse order of removal. Reconnect the harness connectors to the coupler PCB connector.

Disassembling the Steering Wheel

Perform the following procedure to disassemble the steering wheel assembly. (See Figure 3-2.)

1. Using a 5/16-inch nut driver (or appropriate tool), remove the six screws holding the steering wheel assembly to the control panel.

- 2. Using a 7/16-ineh nut driver (or appropriate tool), remove the bolt and washer from the bottom of the encoder hub.
- Pull the shaft from the housing.
- Remove the three screws holding the cover to the shaft.
- 5. Remove the 3/8-inch \times 1-inch screw from the shaft.

Reassembling the Steering Wheel

Replace the steering wheel parts in the reverse order of removal. After reassembling the steering wheel, be sure that the hub can spin freely in the slot of the optical coupler on the PCB.

Removing the Foot Pedal Controls

Perform the following procedure to remove/replace the foot pedal controls.

- 1. Disconnect the foot pedal harness assembly from the cabinet control harness assembly located inside the rear of the cabinet.
- 2. Using a 7/16-inch hex driver (or appropriate tool), remove the nuts and washers from the two bolts holding the foot pedal frame to the pedestal enclosure rear wall. Remove the nut and washer from the adjustable glide protruding through the front of the pedal frame. Remove the foot pedals.
- 3. Replace the foot pedals in the reverse order of removal.

Removing the Game PCBs

Perform the following procedure to remove/replace the game PCBs.

CAUTION

Do not attempt to remove the CPU and Video PCBs while they are connected together. If you are going to remove both of these PCBs, remove the Video PCB first to avoid damaging the PCBs or the edge connectors.

Video PCB

Perform the following procedure to remove/replace the Video PCB. (See Figure 3-4.)

- 1. Turn the game power off.
- 2. Unlock and open the lower rear access panel.
- 3. Remove the four thumb nuts holding the EMI cover to the ground plane.

Championship Sprint Maintenance

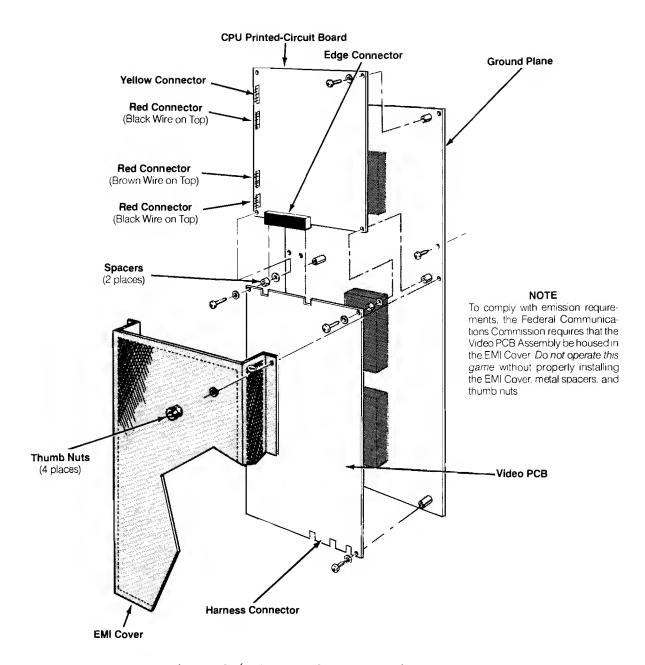

Figure 3-4 Game PCB Removal

4. Disconnect the harness connectors from the bottom of the Video PCB.

NOTE

The brass thumb nuts are easy to cross-thread. Use care when installing and tightening them.

5. Remove *one* of the two thumb nuts and spacers holding the top of the Video PCB (and the bottom of the

- CPU PCB) to the ground plane. Loosen, but do not remove, the other thumb nut.
- 6. Remove the two thumb nuts holding the bottom of the Video PCB to the ground plane. Carefully hold the Video PCB in place to prevent the PCB from falling or causing excessive bending at the edge connector.
- 7. Remove the remaining thumb nut and spacer that was loosened in step 5. Gently disconnect the Video PCB from the CPU PCB.

Maintenance Championship Sprint

- 8. Replace the Video PCB by first connecting the Video PCB to the CPU PCB edge connector. Carefully position both the Video and CPU PCBs so that the holes (in the bottom of the CPU PCB and at the top of the Video PCB) are aligned. Partially install one thumb nut and spacer through both of the PCBs and into the corresponding ground plane post.
- 9. Install and tighten the two thumb nuts holding the bottom of the CPU PCB to the ground plane.
- Install the remaining thumb nut holding the top of the Video PCB (and bottom of the CPU PCB) to the ground plane.
- 11. Finger-tighten both thumb nuts holding the top of the Video PCB (and bottom of the CPU PCB) to the ground plane.
- Connect the harness connector to the bottom of the Video PCB.

NOTE

To comply with emission requirements, the Federal Communications Commission requires that the Video PCB Assembly be housed in the EMI cover. *Do not operate* this game without properly installing the EMI cover, metal spacers, and thumb nuts.

CPU PCB

Perform the following procedure to remove/replace the Central Processing Unit (CPU) PCB. (See Figure 3-4.)

NOTE

If the Video PCB has already been removed, disconnect the harness connectors from the left edge of the CPU PCB, then remove the two thumb nuts holding the top of the CPU PCB to the ground plane. Remove the CPU PCB.

- 1. Turn the game power off.
- 2. Unlock and open the lower rear access panel.
- 3. Remove the four thumb nuts holding the EMI cover to the ground plane.
- 4. Disconnect the harness connectors from the left edge of the CPU PCB.
- 5. Remove the four thumb nuts holding the CPU PCB (and the top of the Video PCB) to the ground plane.
- 6. Gently disconnect the CPU PCB from the Video PCB.
- 7. Replace the CPU PCB by first connecting the CPU PCB to the Video PCB edge connector. Carefully po-

- sition both the CPU and the Video PCBs so that the holes (in the bottom of the CPU PCB and at the top of the Video PCB) are aligned. Partially install one thumb nut and spacer through both of the PCBs and into the corresponding ground plane post.
- 8. Install and tighten the two thumb nuts holding the top of the Video PCB to the ground plane.
- 9. Install the remaining thumb nut holding the bottom of the CPU PCB (and the top of the Video PCB) to the ground plane.
- 10. Finger-tighten both thumb nuts holding the bottom of the CPU PCB (and the top of the Video PCB) to the ground plane.
- 11. Connect the harness connectors to the left edge of the CPU PCB. (See Figure 3-4 for the proper connector locations.)

Removing the Fluorescent Light Assembly

Perform the following procedure to remove/replace the fluorescent light assembly. (See Figure 3-5.)

- 1. Turn the game power off.
- 2. From the front of the cabinet, using a 1/8-inch hex driver, remove the three screws and washers holding the upper retainer to the top of the cabinet.
- 3. Grasp the top edge of the attraction shield and the attraction film, and lift them out of the cabinet.
- 4. Disconnect the fluorescent-light harness connector.
- 5. To remove the fluorescent tube, gently twist the tube a quarter turn and remove it from the sockets. Replace in the reverse order.
- 6. To remove the entire fluorescent light assembly, disconnect the light harness connector in the rear of the cabinet. Using a Phillips screwdriver, remove the two screws holding the fluorescent light board to the cabinet. Lift the fluorescent light assembly out of the front of the cabinet. Replace the fluorescent light assembly in the reverse order of removal.

Removing the Speakers

Perform the following procedure to remove/replace the speakers. (See Figure 3-6.)

- 1. Using a 1/8-inch hex driver, remove the three screws holding the rear of the speaker grille to the cabinet.
- 2. Using a Phillips screwdriver, remove the three screws holding the front of the speaker grille to the cabinet.
- 3. Remove the speaker grille.

Championship Sprint Maintenance

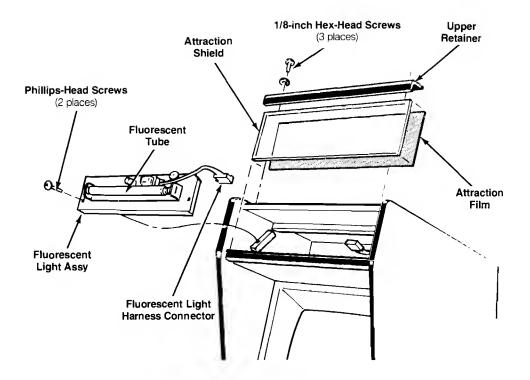

Figure 3-5 Fluorescent Light Assembly Removal

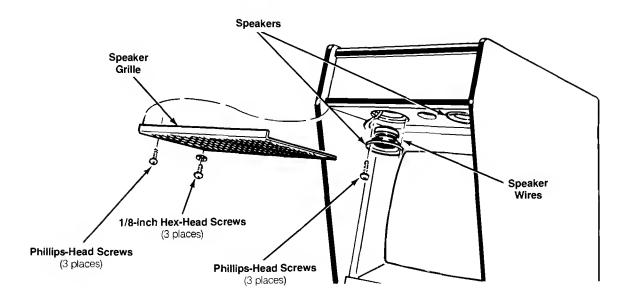

Figure 3-6 Speaker Removal

CAUTION

Do not touch the speaker cones when handling the speakers. The cone material is fragile and can be easily damaged.

- 4. Using a Phillips screwdriver, remove the four screws holding the speaker to the cabinet. Do not let the speaker fall.
- 5. Lower the speaker just far enough to disconnect the two speaker wires. Ensure that the speakers are properly phased by placing the same color-coded connector on the same tab on each speaker.
- 6. Replace the speaker in the reverse order of removal.

N O T E S

3-10

Chapter 4

Troubleshooting

The information in this chapter discusses troubleshooting aids and techniques to assist the service technician when trouble is suspected in a game. Most troubles can be located quickly by following the information in this chapter. However, if problems persist, contact your local distributor or your Atari Games Corporation Customer Service Office, listed on the inside front cover of this manual, for assistance.

NOTEWe recommend that troubleshooting and repair

procedures be performed by a qualified service technician.

Troubleshooting Championship Sprint

Troubleshooting Aids

Troubleshooting aids are provided throughout this manual and the schematic package supplement. The following information is intended to acquaint the service technician with the portions of these documents that contain useful troubleshooting and repair information.

Assembly and Component Locations

The parts lists in Chapter 5 of this manual illustrate the locations of assemblies and components. Printed-circuit board (PCB) illustrations aid in rapidly locating components shown on the corresponding schematic diagram(s).

Diagrams

The schematic package supplement for this manual contains schematic diagrams with component locations, active component type numbers, and electrical values.

Troubleshooting Techniques

WARNING

To avoid electrical shock, turn off the game power before attempting to troubleshoot this game.

The following troubleshooting steps are arranged in a sequence recommended for locating a defective component. The procedure begins with a check of the simple trouble possibilities and progresses to more extensive procedures for localizing the problem to an assembly or major circuit, and then to a defective component.

Check Fuses

Check for open fuses. Refer to the power supply parts list in Chapter 5 and to the display manual for the location and rating of each fuse used in this game. Make sure that replacement fuses are the proper type and rating.

Check Power-Supply Voltages

Improper operation of all circuits usually indicates a power supply problem. Be sure that the proper line voltage is available to the power supply. Refer to the label on the power supply for its voltage rating.

Localize Trouble

Determine the trouble symptom. Use the wiring diagrams in the schematic package supplement to determine which assemblies or major circuits could cause the trouble. Perform the self-test procedure provided in Chapter 2 of this manual.

Visual Check

Visually check for obvious problems in the portion of the game where the trouble is suspected. For example, check for loose or defective solder connections, integrated circuits loose in their sockets, loose cable connections, broken wires, and damaged PCBs or components.

Check Individual Components

Check soldered-in passive components (e.g., resistors, capacitors, diodes) by disconnecting one end to isolate the measurement from the effects of the surrounding circuitry. Often, direct substitution is the most practical way to determine if a component is faulty. However, eliminate the possibility of some other circuit problem that could damage the substitute component.

Repair the Assembly

CAUTION

Soldered-in transistors and integrated circuits are difficult to remove without damaging the printed-circuit board or component. Refer to the information in this chapter pertaining to soldering and replacing integrated circuits and transistors.

Repair or replace the defective part. Refer to Chapter 3 and information in this chapter for special removal and replacement procedures. Check for proper operation of the repaired circuit.

Soldering Techniques

Observe the following recommendations when removing or replacing components soldered to a PCB. Poor soldering practices can damage a PCB or heat-sensitive electrical components.

Choosing the proper soldering iron is essential before attempting to remove or replace soldcred-in components. Excessive heat is a common cause of damage to a component or PCB. However, transient voltages from solder guns or improperly grounded soldering irons can also damage certain voltage-sensitive semiconductor devices. Refer to *Troubleshooting Static-Sensitive Devices* for more specific information.

A 15- to 27-watt pencil-tip soldering iron is recommended to avoid separating the etched circuit wiring from the board material and to avoid damaging active components. A temperature-controlled soldering station rated at 700°F with a fine cone or a very fine chisel tip can also be used.

Championship Sprint Troubleshooting

CAUTION

Solder guns are *not* recommended for removing or replacing soldered-in components on a printed-circuit board. Solder guns can overheat a device, and their large transient voltage can damage a voltage-sensitive device.

The following additional equipment is recommended for removing and replacing soldered-in components:

- Solder Sucker—Hand-operated vacuum tool used to remove liquified solder from the PCB. We recommend the top-of-the-line Soldapullt[®] brand.
- Solder Wick—Resin-soaked copper braid used for removing excess solder from the lead connections on the PCB. See *Removing Integrated Circuits* for precautions relating to the use of a solder wick on a multilayer PCB with plated-through holes.
- Flux Remover—Non-corrosive chemical used to clean foreign material from the PCB before soldering and to remove any flux residue where components have been replaced. Also used to clean any foreign material from the PCB during preventive maintenance. Isopropyl alcohol is recommended.
- Acid Brush—Small stiff-bristled paint or toothbrush used with flux remover to clean flux and other foreign material from the PCB.

Removing Integrated Circuits

The easiest and safest method for removing soldered-in integrated circuits (IC) from a PCB is to cut off each pin as close to the IC case as possible with a tip dyke (diagonal cutter) as shown in Figure 4-1.

Use the proper soldering iron as previously described under *Soldering Techniques*. Then, to avoid excessive heat buildup in one area of the PCB, apply heat directly to each pin in a random order. Remove the loosened pin with the tip of the soldering iron or a needle-nose pliers as shown in Figure 4-2. Allow a moment for the PCB to cool before

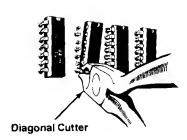

Figure 4-1 Removing IC (Cut-Pin Method)

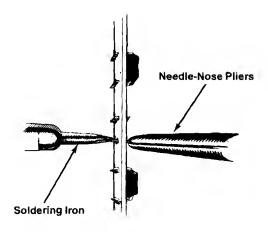

Figure 4-2 Removing IC Pins

proceeding to the next pin. Apply just enough heat to remove any stubborn pins.

For a multi-layer PCB with plated-through holes, use a solder sucker to remove the remaining solder from inside each hole as shown in Figure 4-3. If possible, suck the solder from the opposite side of the PCB from where the heat is applied.

Use a solder wick to remove excess solder from around the lead connection pads on the top and/or bottom surface of the PCB as shown in Figure 4-4.

CAUTION

Do not use a solder wick to remove solder from inside plated-through holes. The heat required for the solder wick to remove the solder from inside the hole could damage the PCB.

Use an integrated-circuit (IC) pulling tool to remove socketed ICs. Do not pry up on one end of the ICs, because the pins could be bent or broken.

Troubleshooting Static-Sensitive Devices

Certain precautions must be taken when working with static-sensitive devices, e.g., microprocessors, field-effect transistors (FET), complementary metal-oxide semiconductors (CMOS), and other large-scale integration (LSI) devices that use metal-oxide semiconductor (MOS) technology. Static charge buildup in a person's body or leakage from an improperly grounded soldering iron can cause static-sensitive device failure.

Before handling a static-sensitive device or a PCB with such devices attached to it, ground any static voltage that may have accumulated in your body by touching an obTroubleshooting Championship Sprint

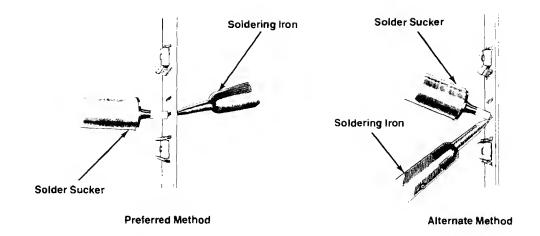

Figure 4-3 Removing Solder from Plated-Through Holes

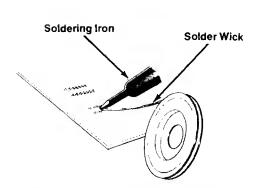

Figure 4-4 Removing Solder from Lead Connection Pads

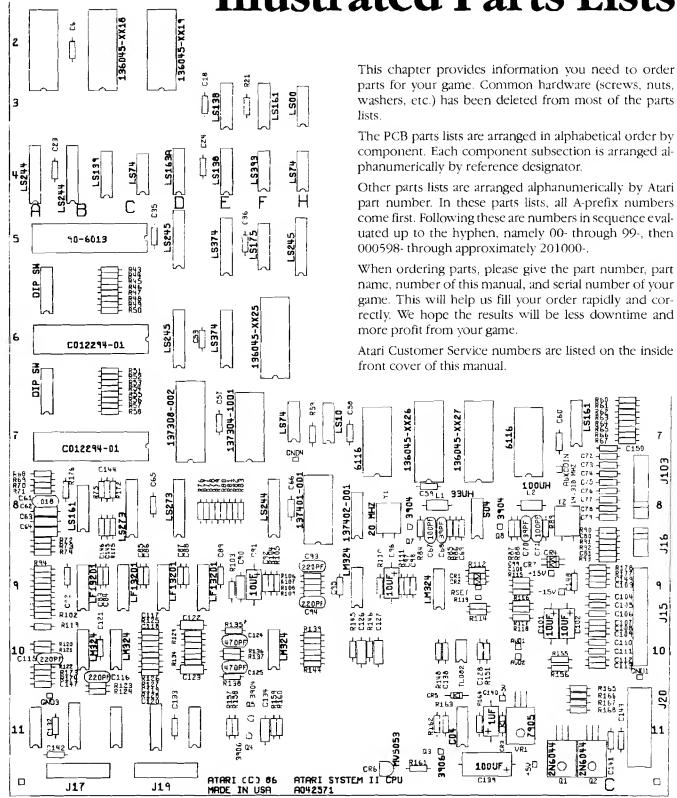

ject that has been earth grounded. A bare wire wrapped around your wrist and attached to an earth ground is ef-

fective when working extensively with static-sensitive devices. When soldering a static-sensitive device, use a soldering iron with a properly grounded three-wire cord. (Refer to *Soldering Techniques* for a discussion of recommended soldering irons and procedures.)

A static-sensitive device can appear defective due to leakage on a PCB. Observe the precautions for grounding static voltages described in the preceding paragraph and clean both sides of the PCB with flux remover or an eraser before replacing what can be a good static-sensitive device. For discrete FETs, clean thoroughly between the gate, drain, and source leads.

Static-sensitive devices can be packaged in conductive foam or have a protective shorting wire attached to the pins. Remove the conductive foam just prior to inserting the device into its socket or soldering it to a PCB. Remove the shorting wire only *after* the device is inserted into its socket or *after* all the leads are soldered in place.

ONFIDENTIAL, Reproduction forbidden without the specific written permission of half a clames Confortation, Milpitas, CA. This drawing so only conditionally issued and neither receipt nor possession thereof conflicts or transfers any right in, or items to use the subject matter of the drawing or any pagin or technical information shown thereof conflicts or transfers any right in, or itemse to use the subject matter of the drawing or any pagin or technical information shown thereof, only not not to the produce this drawing or any part thereof. Except for manufacture by vendors of kland Games Corporation and for manufacture under the corporation's written license, no right is granted to reproduce this drawing or the subject matter thereof, unless by written agreement with or written permission from the corporation.

9K, CAND 9F PAD 1. Overline Nith, Hebroadcon formaden with Conditionally issued, and neither receipt nor poor conditionally issued, and neither receipt nor poor conditionally issued and neither receipt nor poor conditional to the conditional

LIFT PIN 15 OF IC 9K.
 ADD JUMPER BETWEEN 9K PAD 5 AND 9F PAD 1.
 ADD JUMPER BETWEEN 9F PAD 2 AND 9K PAD 15.

NOTE:
1. DO NOT INSTALL R3 AND C143.
2. MODIFICATIONS TO ASSEMBLIES USING 042038-01 REV A AND B PP BOD 150 PP IC 9K.

• LIFT PIN 15 OF IC 9K.

Kit Installation

Your Championship Sprint[™] game uses the System II[™] cabinet designed to accept the necessary hardware to easily convert the cabinet into a variety of games. This chapter contains information that applies to those parts of your existing System II cabinet that are added or replaced to convert the cabinet to a Championship Sprint game. (See Figure 6-1.) The conversion instructions include: (I) replacing the attraction film, control panel, and some integrated circuits (ICs) on the game printed-circuit board (PCB); (2) installing the foot pedal assembly and the cabinet control harness assembly, and (3) cleaning the video display. See Figure 6-1 for the locations of the parts of the System II cabinet that are replaced, installed, and cleaned.

Wiring and schematic diagrams for the Championship Sprint game are contained in the Schematic Package Supplement (SP-292) included with your game.

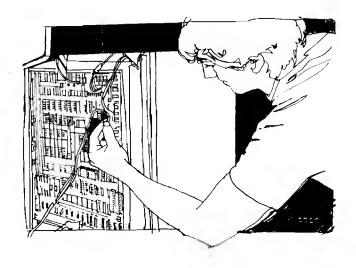

System II Paperboy™ games located in the field were built with a different power supply, Audio PCB, and utility panel than the System II Championship Sprint games. Refer to Chapter 5, Illustrated Parts List, in the *Paperboy Operators Manual* (TM-275) for information regarding these components. The figure number in the manual and the part number for each of these components follow:

Figure No.	Part No.	Component
5-5 5-6 5-12 Refer to CO-275- 01 Supplement	A037671-16 A043146-01 A043046-01 A043785-xx	Linear Power Supply Utility Panel Regulator/Audio III PCB Sierracin 5-Volt Power Supply

For the wiring and schematic diagrams, refer to the *Paperboy Schematic Package Supplement* (SP-275) and the *Sierracin 5-Volt Power Supply Supplement* (CO-275-01).

NOTE

If you do not have the Paperboy manual or the supplements, use the form in the back of this manual to obtain a free copy.

Kit Installation Championship Sprint

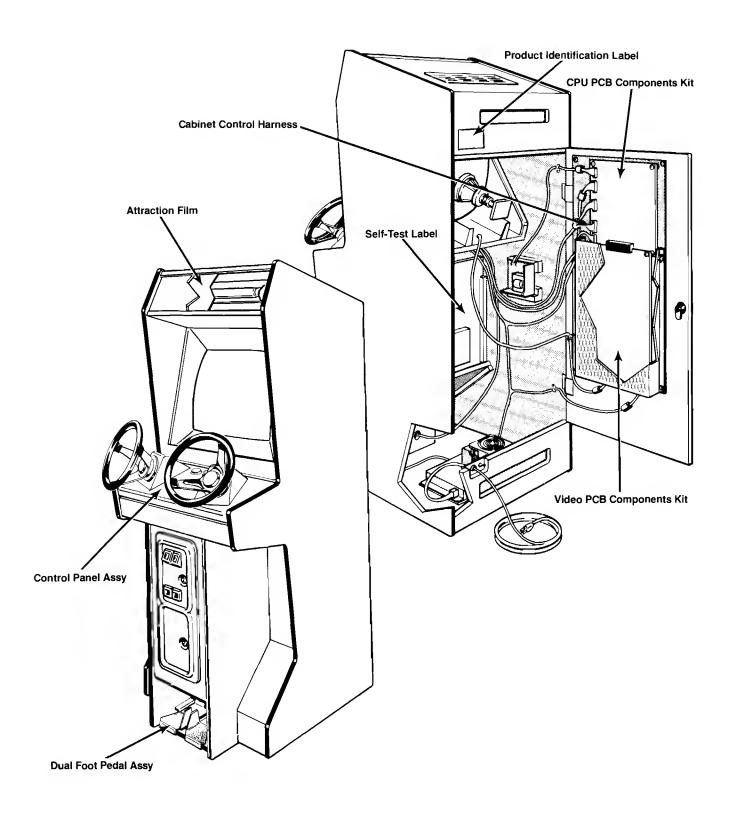

Figure 6-1 Kit Part Locations

Kit Parts Inventory

The assemblies listed in Table 6-1 are included in the Championship Sprint Conversion Kit. Refer to Chapter 5, Illustrated Parts List, for a description of the component parts comprising the control panel, foot pedals, CPU PCB assembly, and Video PCB assembly listed in Table 6-1.

Tools Required

The only tools required to perform a complete Championship Sprint conversion are a Phillips screwdriver, 1/8-inch hex driver, 7/16-inch nut driver, 9/16-inch openend wrench, chip extractor tool, flat black paint, and Scotch tape (or stapler). (A 3/8-inch wrench is also required if your game has a vertically mounted video display.)

Λ

WARNING

To avoid electrical shock, unplug the game before performing the conversion procedures.

The following procedures are arranged in the sequence recommended for performing the game conversion. The parts of your cabinet that are affected by the conversion are removed first and then replaced by the new Championship Sprint kit parts.

NOTE

The following conversion should be performed by qualified service personnel.

Replace the Attraction Film

Perform the following procedure to remove/replace the existing attraction film with the Championship Sprint attraction film. (See Figure 6-2).

- 1. Turn off the game power.
- 2. Using a 1/8-inch hex driver, remove the three screws and washers holding the upper retainer to the top of the cabinet.
- 3. Grasp the top edge of the existing attraction film behind the attraction shield and slide it up to remove.

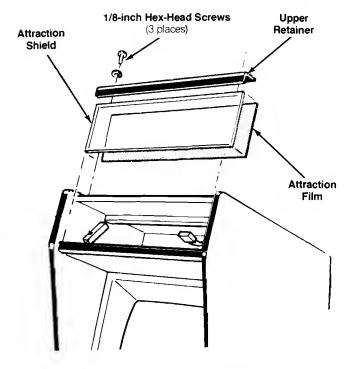

Figure 6-2 Attraction Film Replacement

Kit Installation Championship Sprint

- 4. Install the Championship Sprint attraction film. Make sure the film is fully inserted into the bottom slot.
- 5. Remount the upper retainer.

Replace the Control Panel

Perform the following procedure to remove/replace the existing control panel with the Championship Sprint control panel. (See Figure 6-3).

- 1. Using a 1/8-inch hex driver, loosen the two screws holding the lower retainer to the cabinet.
- 2. Unlock and open the coin door on the front of the cabinet.
- 3. Carefully reach up through the coin door opening and release the spring draw latches located under the control panel on both sides of the cabinet.
- 4. Using a 1/8-inch hex driver, remove the two screws and washers holding the front of the control panel to the cabinet.
- 5. Gently lift the front of the control panel until the front edge clears the cabinet.
- 6. Carefully slide the top edge of the control panel from under the lower retainer.
- 7. Lift the control panel from the cabinet just far enough to expose the control-panel harness connector.
- 8. Disconnect the player control harness connector and remove the control panel from the cabinet.

9. Install the Championship Sprint control panel in the reverse order of removal.

Install the Cabinet Control Harness

Perform the following procedure to install the cabinet control harness. (See Figure 6-1.)

- 1. Remove the existing control harness.
- 2. Plug the cabinet control harness connectors P102, P106, and P103 into the CPU PCB at J102, J106, and J103, matching keyed connectors with keyed PCB headers.
- 3. Route the harness along the existing cabinet harness and attach both together with two twist cable ties.
- 4. Plug the 12-position harness connector P24 into the control panel harness connector.
- 5. Plug the 6-position harness connector P25 into the foot pedal harness connector after the foot pedals have been installed.
- 6. Connect the two green ground wires to the corner mounting screw located at the edge of the switching/linear power supply chassis.
- 7. Mount the harness to the cabinet right side panel with screws at the screw-down tie-wrap locations.

Clean the Video Display Glass

Static electricity attracts dust to the video display glass and can cause the video image to grey out, making the

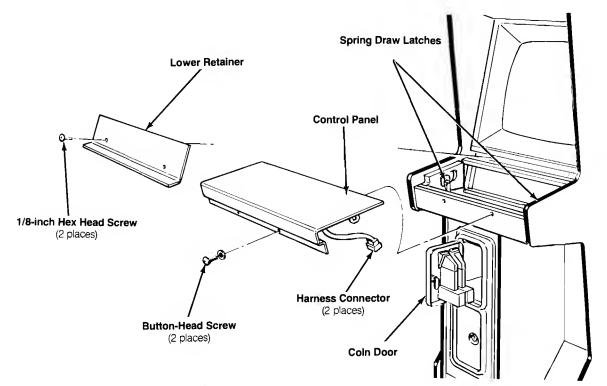

Figure 6-3 Control Panel Replacement

screen colors appear faded. In order to prevent this from happening, the video display glass must be cleaned. Perform the following procedure to clean the display glass.

- 1. Using a 1/8-inch hex driver, remove the two screws holding the lower retainer to the cabinet.
- 2. Grasp the display shield on the bottom edge and gently pull it out about one half inch from the cabinet.
- 3. Gently lower the display shield to free the top edge from under the speaker grille.
- 4. Using a glass cleaner, clean the display glass and the monitor screen. Be sure to avoid spraying the bezel.
- 5. Replace the display shield in the reverse order of removal.

Install the Foot Pedals

Dual foot pedals are used in the Championship Sprint game. Perform the following procedure to install the foot pedals.

- 1. Using a Phillips screwdriver, remove the four screws holding the pedestal front panel to the cabinet. Remove the front panel.
- 2. Using a Phillips screwdriver, remove the two screws from both mounting cleats inside the pedestal side panels. Remove the cleats.
- 3. Paint any unfinished surfaces within the pedestal cnclosure with flat black paint.
- 4. After the paint has dried, insert the foot pedals into the pedestal enclosure opening. Be sure the foot pedal harness is inserted first into the rear enclosure wall opening. Then fasten the foot pedals to the rear enclosure wall with two carriage bolts. Be sure that the bottom of the adjustable glide protrudes through the hole at the front of the pedal frame.
- 5. Using a 9/16-inch open-end wrench, tighten the nut and washer of the glide. (The nut and washer are supplied in the kit.) From the rear of the cabinet, using a 7/16-inch nut driver, tighten the two nuts and washers of the bolts.
- 6. Connect the foot pedal harness to the cabinet control harness inside the rear of the cabinet.
- 7. Using the existing Phillips screws, mount the pedestal front panel and two cleats on the inner rear cabinet wall opposite the rear access panel for future use.

IC Kit

A new set of 28 integrated circuits (1Cs) has been designed for your Championship Sprint Game PCBs. Table 6-2 lists the ICs and their locations on the CPU and the Video PCBs.

Location of Replacement ICs

The CPU PCB Assembly and the Video PCB Assembly showing the location of each IC to be added, deleted, or replaced are included in this manual. (See Figures 6-4 and 6-5.) Each IC location is marked with the letter A, D, or R.

A represents an EPROM to be added D represents an EPROM to be deleted R represents an EPROM to be replaced

Install the Game ICs

Perform the following procedure to install the new integrated circuits (ICs).

▲ WA

WARNING

To avoid electrical shock, unplug the game before performing the conversion procedures if you have not already done so.

- 1. Unlock and open the rear access panel.
- 2. Remove the four thumb nuts holding the EMI cover to the ground plane. (See Figure 3-4.)
- 3. Refer to the CPU PCB Assembly and Video PCB Assembly, and determine the location of the ICs to be replaced, added, and removed. (See Figures 6-4 and 6-5.)

NOTE

Slide a block of wood or similar device behind the PCBs to prevent the PCBs from bending excessively when installing the ICs.

- 4. Locate each IC to be replaced or removed, and remove each with a chip extractor tool.
- 5. For each replacement IC, align all of the pins on one side of the chip, and bend that row inward so that it is parallel to the other row. Carefully insert the chip into the proper socket on the game PCB, making sure the orientation notch faces the correct direction. (The notch differs on the CPU PCB and the Video PCB.)
- Then locate each new IC to be added, and insert each in its correct socket.
- 7. Install the CPU PCB label (Atari part no. 043754-01) and the Video PCB label (Atari part no. 043753-01) on the respective PCBs.
- 8. Reinstall the EMI cover, and connect all the harness connectors.

Kit Installation Championship Sprint

Table 6-2 Integrated Circuits in Championship Sprint Conversion Kit

Designator	Description	Part No.
	ICs on Championship Sprint CPU PCB:	
	Basic Set of ICs:	
2B/C	300 ns Type-27128 EPROM Integrated Circuit	I36045-xI18
2D	300 ns Type-27128 EPROM Integrated Circuit	136045-x119
4M	SLAPSTIC Custom Integrated Circuit	137412-109
6K	300 ns Type-27256 EPROM Integrated Circuit	136045-x124
6L	300 ns Type-27256 EPROM Integrated Circuit	136045-x123
6R	300 ns Type-27256 EPROM Integrated Circuit	136045-x121
6S	300 ns Type-27256 EPROM Integrated Circuit	136045-x120
	U.S. Set of ICs:	
6F	300 ns Type-27256 EPROM Integrated Circuit	I36045-x125
6N	300 ns Type-27256 EPROM Integrated Circuit	136045-x122
7L	300 ns Type-27128 EPROM Integrated Circuit	136045-x126
7N	300 ns Type-27128 EPROM Integrated Circuit	136045-x127
	German Set of ICs:	
6F	300 ns Type-27256 EPROM Integrated Circuit	136045-x225
6N	300 ns Type-27256 EPROM Integrated Circuit	136045-x222
7L	300 ns Type-27128 EPROM Integrated Circuit	136045-x226
7N	300 ns Type-27128 EPROM Integrated Circuit	136045-x227
	ICs on Championship Sprint Video PCB:	
6A	200 ns Type-27256 EPROM Integrated Circuit	136045-x105
6B	200 ns Type-27256 EPROM Integrated Circuit	136045-x106
6C	200 ns Type-27256 EPROM Integrated Circuit	136045-x107
6D/E	200 ns Type-27256 EPROM Integrated Circuit	136045-x108
6F/H	200 ns Type-27256 EPROM Integrated Circuit	136045-x109
6Н/Ј	200 ns Type-27256 EPROM Integrated Circuit	136045-x110
6K	200 ns Type-27256 EPROM Integrated Circuit	136045-xI11
6L	200 ns Type-27256 EPROM Integrated Circuit	136045-x112
6M	200 ns Type-27256 EPROM Integrated Circuit	136045-x113
6N	200 ns Type-27256 EPROM Integrated Circuit	136045-x114
6P/R	200 ns Type-27256 EPROM Integrated Circuit	136045·x115
6R/S	200 ns Type-27256 EPROM Integrated Circuit	136045-x116
6T	200 ns Type-27128 EPROM Integrated Circuit	136045-x117
7 A	200 ns Type-27512 EPROM Integrated Circuit	I36045-x101*
7B	200 ns Type-27756 EPROM Integrated Circuit	136045-x102
7C	200 ns Type-27256 EPROM Integrated Circuit	136045-x103
7D/E	200 ns Type-27512 EPROM Integrated Circuit	136045-x104*

^{*}A 250 ns speed EPROM can be substituted if necessary

NOTE

Some of the IC sockets might be left empty since the System II game PCBs are designed to accommodate different ICs for a variety of games.

Reset the Coin and Credit and Game Option Settings

NOTE

The coin and credit option settings and the game option settings must be reset for the Championship Sprint kit conversion.

The settings are reset with the two dual-in-line package (DIP) switches at locations 6/7A and 5/6A on the CPU PCB. (See Figure 1-2.) Each set of DIP switches contains

[&]quot;x" in the part number denotes the revision level

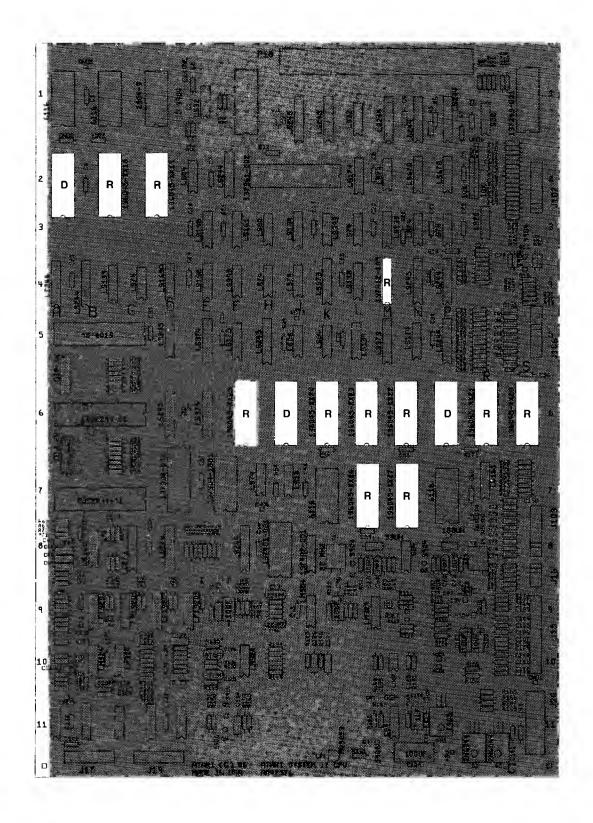

Figure 6-4 Installing ICs into CPU PCB Assembly

Kit Installation

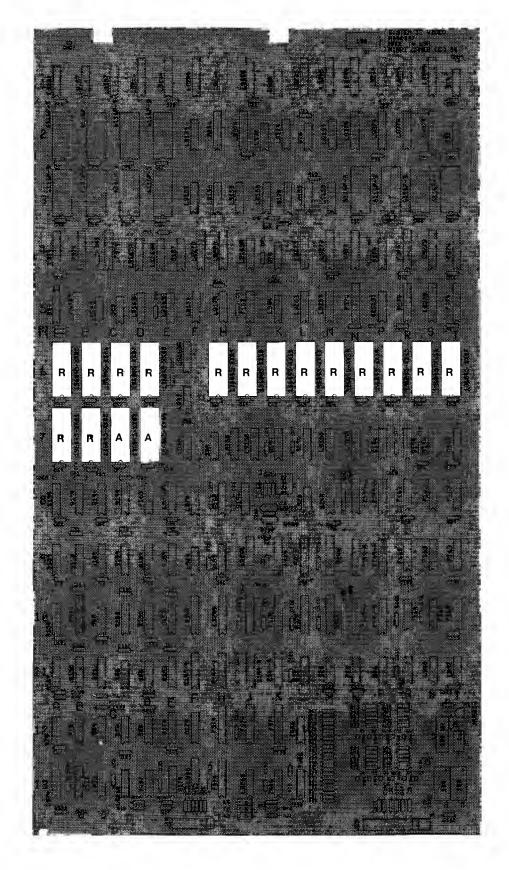

Figure 6-5 Installing ICs into Video PCB Assembly

eight switches. Perform the following procedure to reset the option settings.

- 1. Remove the thin film of plastic covering the option switch, if any remains.
- 2. Using a pen or sharp-pointed instrument, slide the appropriate small button to the left or *off* position. (The steering wheel controls and the pushbuttons are *not* used to change this setting.)

Refer to Tables 1-2 and 1-3 in this manual for the available options and default (recommended) settings.

Install the Self-Test Label

Staple or tape the Championship Sprint Self-Test Label to the inner rear cabinet wall opposite the rear access door.

Install the Product Identification Label

Perform the following procedure to install the Championship Sprint product identification label.

- 1. Remove the protective backing from the Championship Sprint product identification label.
- Place the Championship Sprint product identification label over the existing product identification label on the back of the cabinet.

Inspect the Game

Before applying power, perform the following inspection procedure.

- 1. Carefully check that the Championship Sprint conversion kit parts have been properly installed. Check that all the ICs are inserted properly with the orientation notch facing the correct direction. (Inserting an IC backwards can destroy the IC.) Make sure that the control-panel harness connector is tightly connected to the cabinet control harness connector, and that the spring draw latches under the control panel are securely fastened.
- 2. Plug in the game power cord.
- 3. Perform the self-test procedure as given in Chapter 2. Be sure that all of the DIP switches on the CPU PCB

- have been properly set. Refer to Tables 1-2 and 1-3 in this manual for the available options and the default (recommended) settings.
- 4. Be sure to recalibrate each foot pedal. Refer to *Calibration Procedure* in Chapter 2.
- Be sure to reset the high score table and the accounting information. Refer to the procedure in Reset the High Score Table and the Accounting Information later in this chapter.
- 6. Close and lock the rear access panel.

Reset the High Score Table and the Accounting Information

The high score table and the accounting information, or game statistics, must be reset after completing the conversion to ensure accurate game data. This information is displayed on the Accounting Information screen in the Self-Test Mode. (Refer to *Accounting Information* in Chapter 2.) Perform the following procedure to reset this information.

- 1. Enter the Self-Test Mode by turning on the self-test switch, and press the red start (right) button until the Accounting Information screen is displayed.
- Rotate the left steering wheel to select RESET HIGH SCORE TABLE.
- Press the blue car button to change the NO message to YES.
- 4. Press the red start button to reset the high score table. After a brief *PLEASE WAIT* message is displayed, the self-test automatically advances to the next screen.
- 5. Press the red start button until the Reset Saved Info Screen is displayed again. Rotate the left steering wheel to select *RESET ACCOUNTING INFO*.
- 6. Press the blue car button to change the *NO* message to *YES*.
- 7. Press the red start button to reset the accounting information. After a brief *PLEASE WAIT* message is displayed, the self-test automatically advances to the next screen.

Form to Obtain Free Paperboy Manual, Schematic Package Supplement, and/or 5V Sierracin Power Supply Supplement

System II[™] Paperboy games located in the field were built with a different power supply, Audio PCB, and utility panel than most of the System II Championship Sprint[™] games. The *Paperboy Operators Manual* (TM-275) has part number information on these components. The wiring and schematic diagrams are printed in the *Paperboy*

X

Schematic Package Supplement (SP-275) and the Sierracin 5-Volt Power Supply Supplement (CO-275-01).

If you do not have this manual or the supplements, you can obtain one free copy of each one that you need. To receive your free copy(ies), please fill in the information required below and mail this postage-paid form to us.

Accounting Information

Left Coins	Number of coins deposited in left coin mechanism	Total Games	Total number of coins deposited in all coin mechanisms
Right Coins	Number of coins depos- ited in right coin mechanism	Total Game Time	Accumulated time of all 1- or 2-player games played in hours, min-
Add-A-Coins	Total number of coins deposited in all coin	Average Game	utes, and seconds Total game time divided
	mechanisms during add- a-coin mode only	Time	by total games in hours, minutes, seconds
1 Player Heats	Total number of heats/ races run with 1 player only	Total On Time	Total time in hours, min- utes, and seconds that the game was turned on
2 Player Heats	Total number of heats/ races run with 2 players	Total Play Time	Total time in hours, min- utes, and seconds that the game was played

Reset Saved Info Screen

NOTE

Use this screen only to reset high score table and accounting information.

How to reset: select item to be reset with left steering wheel. Push blue car (left) button to toggle between Yes and No. Press red start button to reset selected tables.

Reset Accounting Info?	Yes	No
Reset High Score Table?	Yes	No

Game Times*

0:30	3:00	5:30
1:00	3:30	6:00
1:30	4:00	6:30
2:00	4:30	7:00
2:30	5:00	7:30
		8:00 & Up

^{*}Note: It is possible for a limited number of players to play Championship Sprint for over eight minutes. Generally, this can occur during a 2-player game when one or two players lose frequently and continue using the adda-coin feature. In locations where there are many highly skilled players, you should expect to see 3–7% of total games played at over eight minutes (after four weeks on location).

Warranty

Seller warrants that its printed-circuit boards and parts thereon are free from defects in material and workmanship under normal use and service for a period of ninety (90) days from date of shipment. Seller warrants that its video displays and laser video disc players (in games supplied with displays and video-disc players) are free from defects in material and workmanship under normal use and service for a period of thirty (30) days from date of shipment. None of the Seller's other products or parts thereof are warranted.

If the products described in this manual fail to conform to this warranty, Seller's sole liability shall be, at its option, to repair, replace, or credit Buyer's account for such products which are returned to Seller during said warranty period, provided:

- (a) Seller is promptly notified in writing upon discovery by Buyer that said products are defective:
- (b) Such products are returned prepaid to Seller's plant; and
- (c) Seller's examination of said products discloses to Seller's satisfaction that such alleged defects existed and were not caused by accident, misuse, neglect, alteration, improper repair, installation, or improper testing.

In no event shall Seller be liable for loss of profits, loss of use, incidental or consequential damages.

Except for any express warranty set forth in a written contract between Seller and Buyer which contract supersedes the terms herein, this warranty is expressed in lieu of all other warranties expressed or implied, including the implied warranties of merchantability and fitness for a particular purpose, and of all other obligations or liabilities on the Seller's part, and it neither assumes nor authorizes any other person to assume for the Seller any other liabilities in connection with the sale of products by Seller.

The use of any non-Atari parts may void your warranty, according to the terms of the warranty. The use of any non-Atari parts may also adversely affect the safety of your game and cause injury to you and others. Be very cautious in using non-Atari-supplied components with our games, in order to ensure your safety.

Atari distributors are independent, being privately owned and operated. In their judgment they may sell parts or accessories other than Atari parts or accessories. Atari Games Corporation cannot be responsible for the quality, suitability or safety of any non-Atari part or any modification including labor which is performed by such distributor.
